

DASU HYDROPOWER PROJECT

Volume-01, December, 2017

Newsletter

Chairman Wapda

It gives me immense pleasure to write a few words for Newsletter on Dasu Hydropower Project. It is currently the largest hydropower project under implementation not in Pakistan but in the whole of South Asia. I feel proud that work on Dasu HPP is gaining momentum with the passage of time. The perseverance and dedication of all employees and workers of WAPDA, consultants and contractors are indeed worth appreciating. I strongly believe that Dasu HPP will play a pivotal role in the development and prosperity of the country. I pray to Almighty Allah for blessing us with the commitment and courage to complete this project successfully.

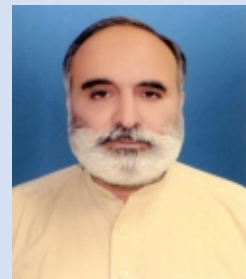

Lt. General (Retd)
Muzammil Hussain

General Manager/PD Dasu HPP

Dasu HPP is no doubt a vital project of the country in the Water and Energy Sectors. The launching of Dasu HPP newsletter is an important milestone since it will be an important tool for information sharing among all stakeholders of the Project. I appreciate the efforts of the Communication Section of DHPP - SRU and hope that they will continue to make progress in this context.

Engr. Javed Akhtar

Deputy Commissioner Kohistan

Dasu Hydropower project's importance is multidirectional. It will play a vital role in socioeconomic uplift of district Kohistan as well as the overall economic development of the country. The district administration of Kohistan will continue to provide assistance to WAPDA not only in the acquisition of land required for this project, but also in removing day to day obstacles of its ongoing work.

M. Asif

Kohistan – The Project Area

Kohistan literally means the land of mountains. It is bounded on the North and North-East by Ghizer and Diamer Districts of Northern areas, on the South. East by Mansehra District on the South by Battagram District and on the West by Shangla and Swat Districts. The River Indus flows through the heart of Kohistan from start to end while dividing the District into Hazara Kohistan (East) and Swat Kohistan (West). Few Indo Aryan languages in addition to Pashto are spoken in this area. The two areas have different history and culture with some commonalities. The narrow Indus valley in Kohistan is flanked by two mightiest ranges of the world. On the left bank are the offshoots of the Himalayas while on the right bank are the offshoots of the Karakorum. The District is warm in summer except some areas of high altitude and very cold in winter. There is heavy snowfall and temperature generally falls below freezing point especially in upper elevations. Monsoon reaches the lower parts of Kohistan i.e. Banked, Batera, Ranolia, Dubair and Jijal only.

Dasu Hydropower Project with a capacity of 4320 MW is being constructed about 7 KM upstream from Dasu, the capital of Kohistan. Indus River has a unique and feasible nature for construction of dams. In this background, a series of dams are being or proposed to be constructed over River Indus like Bonji, Diamer Bhasha, Dasu Dam, Pattan Dam, Thakot Dam and Tarbela Dam etc.
